### **President's Note**

Another year has passed and a new one has begun; bringing new hopes for the industry. I am sure that 2018 will continue to be another busy year responding to the various market challenges. I hope we will again be able to weather through all the challenges, especially with the continuing volatility of the tin price and the uncertainty in the demand for our tin-based products.

The impending trade dispute that is looming ahead between the world's two biggest economies, the US and China, must be taken seriously as it will have a

On 14 February 2018, Bank Negara Malaysia announced that Malaysia's 2017 GDP recorded a commendable growth of 5.9 per cent as compared to 4.2 per cent recorded in 2016. This positive growth was largely driven by strong private sector spending and supported by the services, manufacturing and agricultural sectors.

Meanwhile, the manufacturing sector, which is the country's biggest revenue earner, continued to be spear-headed by its best performing Electrical and Electronic (E&E) sub-sector. E&E products exported last year to-taled some RM343 billion that accounted for 36.7 per cent of the total value of the overall manufacturing sector. The E&E sub-sector is expected to continue to perform strongly to contribute towards the country's economy.

Malaysia has once again been listed as one of the top five countries preferred as an investment destination, according to a recent survey conducted by BAV Consulting and Wharton School of the University of Pennsylvania; ahead of our neighbor, Singapore. Such recognition will certainly help our country attract direct foreign investment and further spur economic growth.

Before I conclude this brief Note, may I, on behalf of the Management Committee, wish everyone a Blessed and Prosperous 2018, and also a belated Happy Chinese New Year to all our Chinese colleagues. May the year of the dog bring good health, good luck and wealth throughout the year for all of us.

With warmest regards,

Mat Tena'ain Abu Bakar

President

### **Economic News**

### **Economy Will Continue to Perform Strongly**

Malaysia's economy will continue to perform strongly following solid trade numbers in November last year, said AmBank Research. The firm said the domestic economy was expected to grow around 5.5 per cent this year, supported by domestic activities and export.

"Both our exports and imports continued to perform favourably with November's exports up for the 12th consecutive month at double digits by 20.4 per cent year-on-year (y-o-y) while imports gained 21.2 per cent y-o-y, bringing November's trade balance to RM9.9 billion. We remain upbeat on the economic performance in part due to strong imports and capital (up 12.2 per cent y-o-y), and intermediate goods (+13.8 per cent y-o-y), which act as an injection to the overall economic activity. Besides, we foresee exports will continue to aid the overall economic activity," said AmBank Research.

The firm said its preliminary estimates showed the gross domestic product (GDP) of the fourth quarter of last year at around six per cent, with its fullyear forecast at 5.9 per cent. It expects exports to grow by 21 per cent y-o-y. AmBank Research said exports of electrical and electronics (E&E) had continued to expand strongly by 21 per cent y-o-y in November last year from 16.9 per cent y-o-y in October. "The E&E segment is envisaged to perform robustly, benefiting from the cyclical growth underpinned by a healthy external demand."

Exports were also being supported by chemical and chemical products (+20.2 per cent y-o-y), and manufacture of metals (20.8 per cent y-o-y) while petroleum products grew 1.2 per cent y-o-y. Total export volume grew strongly by 9.7 per cent y-o-y in November. On the ringgit performance this year, AmBank Research said the local note was projected at 4.00 to 4.02 against the US dollar for the full-year average. "We expect the US dollar/ringgit to remain on a strong note with our end-period projection at 3.95, which is our base case, and best case is at 3.76," it added.

#### Malaysia 4th Best Country to Invest In

Malaysia is one of the best countries to invest in, despite registering a slight drop in total value of approved investments last year. It is the fourth best country for investment this year, according to US News, which has ranked its top 20 list of "Best Countries To Invest In" based on the World Bank criteria. The World Bank highlighted four factors — people, environment, relationships and framework — to qualify as a country worthy of investment,

US News, founded as a weekly magazine in 1933 and turned mainly to web-based publishing in 2010, released its 2018 Best Countries ranking last month. It had surveyed more than 21,000 people in 80 countries, assessing them on 65 different attributes, including cultural influence, entrepreneurship and quality of life.

Malaysia is ranked behind the Philippines, Indonesia and Poland, but ahead of Asean neighbours Singapore (fifth) and Thailand (eighth). Others in the top 10 are Australia (sixth), Spain (seventh), India (ninth) and Oman (10th). Malaysian Investment Development Authority (Mida) yesterday disclosed that Malaysia had recorded approved investments of RM197.1 billion in the manufacturing, services and primary sectors last year.

Domestic direct investments accounted for the bulk of the investments, or 72.2 per cent, at RM142.4 billion while foreign direct investments (FDIs) contributed RM54.7 billion, or 27.8 per cent. International Trade and Industry Minister Datuk Seri Mustapa Mohamed said the investments were derived from 5,466 projects, which were expected to generate 139,520 jobs.

"The country's overall investment performance moderated by 7.4 per cent due to lower approved investments in the services sector, which saw a decline of 17.2 per cent to RM121.1 billion last year, from RM146.2 billion in 2016. The decline was mainly attributed to the real estate subsector, which saw a 28.7 per cent drop in value to RM45.7 billion despite a 43.1 per cent increase in the number of projects approved, re-

flecting a change in investment strategies towards smaller-sized projects in the subsector. Nonetheless, the overall investment performance was bolstered by the manufacturing and primary sectors which recorded increases of 8.9 and 51.2 per cent, respectively," said Mustapa at the presentation of Malaysia's Investment Performance Report 2017, here, yesterday.

In the manufacturing sector, domestic investments were dominant, contributing 66.2 per cent to the total investment approved, while the balance came from FDIs. Most of the domestic investments were in new projects (RM31.8 billion) while RM10.3 billion went into expansion or diversification projects. The sector's biggest foreign investors were from China, Switzerland, Singapore, the Netherlands and Germany, accounting for RM12.1 billion, or 56 per cent, of foreign investments approved last year.

The services sector remained the largest contributor with RM121 billion in value, or 61.4 per cent of total approved investments. This is despite a contraction of 17.2 per cent last year although the number of projects rose 7.7 per cent. The sector continued to be the largest employer in the economy last year, having created 82,172 job opportunities, or 59 per cent of the total opportunities in the manufacturing, services and primary sectors.

Primary sectors saw a substantial increase of 51.2 per cent in approved investments from 48 projects worth RM12.4 billion compared with RM8.2 billion from 41 projects in 2016. The mining sub-sector led with approved investments of RM11.7 billion in 32 projects, mainly from the oil and gas exploration activities and followed by the plantation and commodities and agriculture.

### Electrical & Electronic Industry News

### **GUH Plans Expansion at Penang and China PCB Ops**

Riding on the rising global demand for home appliances, GUH Holdings Bhd is planning for two waves of expansion for its printed-circuit board (PCB) business. Group managing director Datuk Kenneth H'ng told StarBiz that the expansion would be for its operations in Penang and China. "More than RM10mil is allocated for the expansion of the Bayan Lepas plant. The expansion exercise should be completed in early 2019 and will raise our annual output here. The expansion should contribute to our financial year ending Dec 31, 2019," he added.

"The expansion in Penang will increase the PCB production output here by 25%. "The production in Suzhou is 90% utilised, so it is necessary to expand. We are now studying the budget for the expansion in China," he added. According to online business intelligence portal Statista, the home appliances segment is projected to grow at a compounded annual growth rate of 9.4% from 2018-2022 to reach US\$109.8bil from US\$76.6bil in 2018.

GUH's PCBs are used by major brandnames of home appliances. "A washing machine or refrigerator has one to two single-sided or double-sided PCBs in it," he added. The PCB revenue of GUH is projected to grow at about 5% for the first half of 2018, compared to the same period of 2017. The group's PCB revenue for the six months of 2017 was RM140mil. Moving ahead, GUH wants to grow its PCB business in the automotive market. "Now, the automotive segment is about 10% of the group's revenue," he added.

According to Euler Hermes, the world's leading trade credit insurer, worldwide vehicle sales will reach 98.2 million units in 2018 before topping 100 million in 2019. Quoting Euler Hermes, H'ng said China would lead the way as the largest contributor to sales growth with India coming in second, more than offsetting the decline in the US and UK sales. On GUH's property business, H'ng said the group was now redrawing the plans for a mega-township project for launch in 2019 in

Simpang Ampat. "There would be commercial, residential and high-rise components for the mixed-development scheme. We are now planning the GDV for it," he added.

According to H'ng, the unbilled sales for the property segment is about RM20mil for 2017. "This comes from our Taman Bukit Kepayang project in Seremban, where the properties, comprising terraced and semi-detached houses, are sold between RM600,000 and RM1.5mil. We sold 30% of the 200 houses launched last year in Taman Bukit Kepayang," he added.

On its water treatment segment, H'ng said the group was now negotiating for RM500mil worth of projects in the country. It is now carrying out works for seven projects with a contract value of RM150mil. "These projects, with an unbilled sales of RM80mil, are scheduled for completion in 2020," he added. The group currently has about RM100mil in cashflow and an undeveloped land bank of 620 acres in the country. The land bank is located in Taman Bukit Kepayang (150 acres), Kuala Muda, Kedah (385 acres) and Simpang Ampat (70 acres) and Sungai Bakap (90 acres) in Penang.

### QES Group to Ride on Rising Demand for Semiconductors

Global demand for semiconductors is expected to provide a strong boost for QES Group Bhd as major multinational companies increase their investments in automated handling equipment. QES managing director and president Chew Ne Weng said he expected the company's automatic vision inspection and automated handling equipment manufacturing business to ride on this growth.

"We believe the semiconductor industry is still riding on the upcycle. Hence, we do not foresee any letdown in global semiconductor sales in the immediate term," he said after the listing of the company on the ACE Market of Bursa Malaysia.

At the close, QES share price ended the day at 22 sen, up three sen from its offer price of 19 sen. It was actively traded with 123 million shares done. It had opened at 24.5 sen. QES also manufactures optical inspection equipment, automated handling equipment and advanced wafer measurement system.

Chew said QES intends to develop three key products. They are the fully automated vision inspection system; automatic wafer packing system and automatic wafer ID. On the cards are to expand its recurring income segment by implementing a customer relationship management software as well as diversifying its market segments and products. "We plan to purchase demonstration equipment under our distribution division to enhance support to our customers throughout our subsidiaries in the Asean region," he added.

QES plans to penetrate the higher education, petrochemical and pharmaceutical market segments. Under the listing exercise, QES raised RM28.82mil from its public issue of 151.66 million new shares at 19 sen per share. Its public offer of 37.92 million new shares to the public under its proposed listing on the Ace Market was oversubscribed by more than 19 times.

#### **Worry Over Semiconductor Sector**

Local technology stocks have taken quite a beating on the stock market lately, raising concerns among investors on the outlook for these companies – and the sector. Analysing their performance on a year-to-date basis, KESM Industries Bhd, which hit an all-time high of RM22 on Jan 18, has seen its share price drop 8%. Year-to-date, Inari Amertron Bhd has tumbled more than 25%. Their performance lately does not come as much of a surprise, said one analyst, given the fact that the sector hit a record high in early January.

In 2017, Malaysian semiconductor companies saw between a 53% and 105% increase in their share price. Globally, tech stocks have been outperforming for nearly four years. TA Securities said in a report earlier this week that global semi-

conductor sales in January 2018 remained robust at US\$37.6bil (RM147.15bil). This represented a 22.7% year-on-year growth and 1% month-on-month drop - marking eighteen consecutive months of growth on a year-on-year basis.

"The marginal decline in sales on a month-onmonth basis was due to seasonality. We believe sales continued to be driven by memory, the largest and fastest growing semiconductor category which contributed to 2017's record high sales of US\$412.2bil (RM1.6 trillion). That said, the World Semiconductor Trade Statistics (WSTS) has forecast industry's sales in 2018 to moderate to single-digit levels of 7% with broadbased growth across product categories," the research house noted.

Despite the WSTS' projection, MIDF Research expects demand for semiconductor products to remain robust, driven by new smartphone lineup; expected recovery in the tablet market and stable demand from the automotive industry. "Capital spending will continue to growth, albeit slower pace. We view that this could negatively impact the dividend payout ratio. Given the impressive share price performance in 2017, we view that most of the semiconductor companies under our coverage does not trade at attractive valuation at this juncture. All factors considered, we are maintaining our 'neutral' recommendation on the sector."

TA Securities has also maintained a neutral' outlook for the local tech sector. "With prevailing concerns on downside risk from the ringgit's strengthening and rising commodity prices, we are maintaining our neutral stance on the sector. That said, we have upgraded Inari and MPI to 'buy' as the recent market weakness have presented added upside potential. Elsoft is our top pick. We like the stock for its strong order book, rich margins, lower susceptibility to foreign exchange (forex) fluctuations and research and development capabilities. Sell Unisem."

Meanwhile, Kenanga Research has more optimism for KESM. "Post earnings release, we keep our forward estimates and target price unchanged. We continue to like KESM given its unique position in the high growth automotive semiconductor business and believe that the

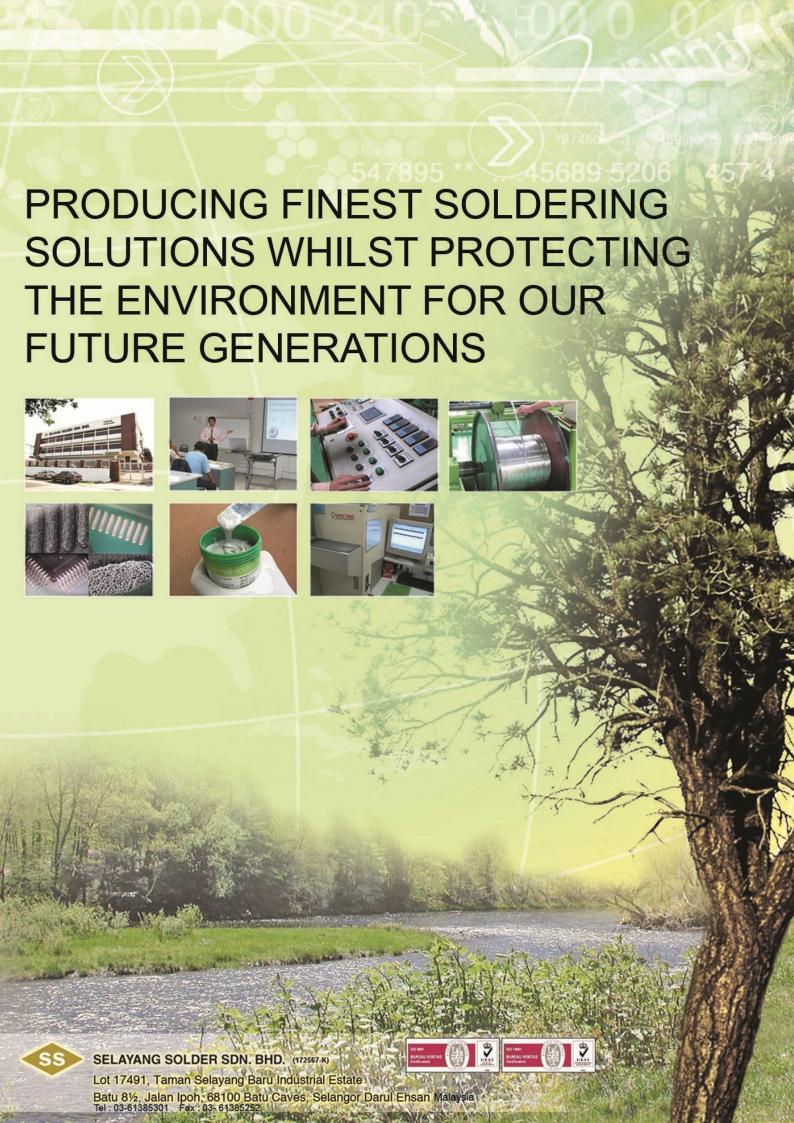

company will benefit from two salient trends, namely rising car production by global automakers and increased chip content within vehicles."

CIMB Research has revised down its earnings forecast for local tech companies to account for forex fluctuations. It said the appreciation in the ringgit against the US dollar will be negative for the domestic semiconductor sector as it will reduce the sector's profitability. "For companies under our coverage, Unisem will be the most affected by forex volatility as it does not have a hedging policy and has one of the highest proportions of localised content among its peers," the research house said.

"We estimate for every 1% strengthening of the ringgit against the dollar, Unisem's 2018 earnings

per share could fall by 2.6%." The research house says automotive and industrial segments are expected to be the new growth drivers for the tech sector. McKinsey & Co projects automotive semiconductor demand to post 2015 to 2020 compounded annual growth rate (CAGR) of 6%, higher than the overall industry CAGR of 3% to 4%. It expects the growth to be driven by higher vehicle sales and rising electronic content in vehicles.

### Pestle & Mortar Clothing X Royal Selangor Collection Launch

Collaborations have been so ubiquitous in the field of fashion, that it truly takes two with both story and intention to come up with a collaboration that truly means something. Over the start of the past weekend, fans, family and friends of both Royal Selangor and Pestle & Mortar Clothing have come together to celebrate the occasion of this one-of-a-kind collaboration. This 6-item capsule collection marks 140 years' worth of combined heritage, craftsmanship and expertise in each respective fields. The collection launch was held at Royal Selangor's flagship store down at Pavilion, KL. Part of the store's interior has been swapped out for industrial crates that served as the collection's display units. Just to add on to PMC's signature flare, a DJ deck was set up to keep the vibes going through out the night, as guests filled up the event space.

Other than the tunes spun by the bearded camera god Roshan Menon himself, guests were entertained with a fantastic selection of hor d'oeuvres — from beef satay served in shot glasses to tiny, flavor-packed nasi lemak on a spoon. Guests were definitely happy to enjoy the free-flowing alcohol (courtesy of Tiger) and decadent ice cream flavors (courtesy of Piccoli Lotti).

When the event was at full swing, guests were able to learn more about how the collection came about, and its creative process through the Q&A session for Hugh Koh, the creative director of Pestle & Mortar Clothing and Yoon Li, the executive director for Royal Selangor. Overall, guests were both excited and amused at the somewhat unexpected collaboration between these two Malaysian powerhouses. A crowd favorite was definitely the Worker Jacket and the Worker Shirt, not only for their utilitarian aesthetics but also the level of craftsmanship that comes through the garments, from the fabrics to the pewter detailing.

The launch party was a perfect way to commemorate the rare occasion where streetwear meets heritage, and this goes to show ever-changing scene in fashion. This marks the first of many exciting collaborations Pestle & Mortar Clothing has in store for the rest of 2018.

Sources : Department of Minerals and Geoscience, Malaysia Malaysia Smelting Corporation Bhd

\* : The figures include high-grade tin (99.9% Sn) imported for consumption.

\*\* : Preliminary.

Note : Local consumption of tin metal refers to the use of tin in a particular application.

Sales to manufacturing industries have been used as proxy for consumption except in the case of manufacture of tinplate for which actual consumption data available.

### **Association Members**

Currently, the Association comprises one associate and 15 ordinary members covering the three main sectors of Malaysia's tin-based products manufacturing industry, namely the tinplate, solder and pewter sectors as listed below:

### **ORDINARY MEMBERS:**

### **TINPLATE**

Perusahaan Sadur Timah Malaysia Bhd (PERSTIMA)

### **SOLDER**

Henkel (M) Sdn Bhd
Metahub Industries Sdn Bhd
Nihon Superior (M) Sdn Bhd
RedRing Solder (M) Sdn Bhd
Selayang Metal Industries Sdn Bhd
Selayang Solder Sdn Bhd
Senju (M) Sdn Bhd
Shen Mao Solder (M) Sdn Bhd
Premium Metal Sdn Bhd

#### **PEWTER**

Oriental Pewter Sdn Bhd
Present & Artifact Sdn Bhd
Royal Selangor International Sdn Bhd
Selwin Pewter Sdn Bhd
Tumasek Pewter Sdn Bhd

### **ASSOCIATE MEMBER:**

Malaysia Smelting Corporation Bhd

### MSC - A Global Integrated Tin Mining and Smelting Group

The MSC Group is currently one of the world's leading integrated producers of tin metal and tin based products and a global leader in custom tin smelting since 1887.

The Malaysia Smelting Corporation Berhad ("MSC" or "the Company") and its subsidiaries ("MSC Group" or "the Group") is currently one of the world's leading integrated producers of tin metal and tin based products and a global leader in custom tin smelting since 1887. In 2017, the Group produced 27,172 tonnes of tin metal thus maintaining its position as the third largest supplier of tin metal in the world. MSC is listed both on the Main Market of Bursa Malaysia since 15 December 1994 and the Main Board of Singapore Exchange ("SGK-ST") since 27 January 2011. MSC is a subsidiary of The Straits Trading Company Limited ("STC") of Singapore.

With the Group's core expertise and solid foundation over a century of smelting excellence to its credit, the Group's smelting facility in Butterworth operates one of the most low cost smelting plants in the world, converting primary, secondary and often complex tin bearing ores into high purity tin metal for industrial application. The plant has a production capacity of approximately 40,000 tonnes of refined tin a year and still uses reverberatory furnace technology. But this may change as the plant is preparing to introduce modern smelting technology using Top Submerged Lance ("TSL") furnace.

This will significantly increase the plant's smelting capacity and drive operating cost down. The refining flowsheet has undergone major changes and is currently capable of processing crude metal with a myriad of impurities.

In the mid-90's the Group started a tin marketing and trading arm under the smelting division. The downstream unit provides the Group with hedging, pricing and marketing linkages to the Kuala Lumpur Tin Market ("KLTM")/London Metal Exchange ("LME") as well as the end-user markets worldwide. MSC Straits refined tin brand which is registered at KLTM and LME is accepted worldwide and has purity ranging from the standard Grade A (99.85% Sn) to the premium grade electrolytic tin (99.99% Sn).

In November 2004, MSC expanded upstream in mining through the acquisition of Rahman Hydraulic Tin Sdn. Bhd. ("RHT"), Malaysia's long established and currently the largest operating open-pit hard rock tin mine. Since the takeover, extensive exploration works and improvements of milling/concentrator circuits and recovery operations have been undertaken and today RHT is a sustainable and significant tin producer in Malaysia.

The Group's 40% equity interest in Redring Solder (M) Sdn. Bhd. ("Redring Solder") provides vertical integration to its tin smelting business and an entry into a profitable downstream solder manufacturing

business with significant growth potential. Redring Solder's principal activities are the manufacture and sale of solder products for jointing and semi-conductor applications in the electrical and electronics industries.

#### GROWTH STRATEGY

The Group's niche expertise in tin is continually being strengthened in all areas over the entire global tin supply chain covering geology, mining, mineral processing, smelting, marketing, resource management and financing.

MSC will pursue its growth strategy on its core business in tin through strategic acquisitions and organic growth where its core expertise, skills and capabilities can add value and make a difference particularly in increasing operating efficiencies, innovating products and services as well as forging global commercial and marketing networks to ensure its continued leadership position in the industry.

Investment opportunities will continue to be evaluated and the Group may in future decide to invest in selective projects that meet its investment criteria. Main emphasis will be on opportunities in regions where the country risks could be effectively managed and that the mines could be developed and operated with relatively lower cost structure.

# The Game Changer LOCTITE GC 10

### First-Ever Temperature Stable Solder Paste

Henkel has developed the first-ever temperature stable no-clean solder paste. LOCTITE GC 10 is stable at room and elevated temperatures for extended periods of time, providing benefits throughout the logistics and supply chains, while still offering exceptional printability and reflow performance.

Improved stability

Improved printing

Improved paste managemen

Improved reflow

Improved logistic

Cost saving
